A developer on mission

Challenges to unlock

Motivated engineers keep going

Wait you have “Security” – a new level to clear

This is insane

What is this one?
Oh Governance!!!

How fast you could deliver Customer Value?

There are organizations like Mario Game

Mario (Dev, Testers, Ops) go thru these level

Centralize Governance
“to”
Decentralized Governance

Organizations today are subject to many regulations governing the protection of confidential information, financial accountability, data retention and disaster recovery, among others. They're also under pressure from shareholders, stakeholders and customers.

https://www.cio.com/article

"IT governance is the responsibility of executives and the board of directors, and consists of leadership, organizational structures, and processes that ensure that the enterprise's IT sustains and extends the organization's strategies and objectives."

https://www.architectureandgovernance.com/

Compliance tick boxes
“to”
Compliance as Code

Faking security controls
“to”
Baking them in delivery pipelines

No to tedious audits
“to”
Yes to automated evidence

How fast you could deliver Customer Value?

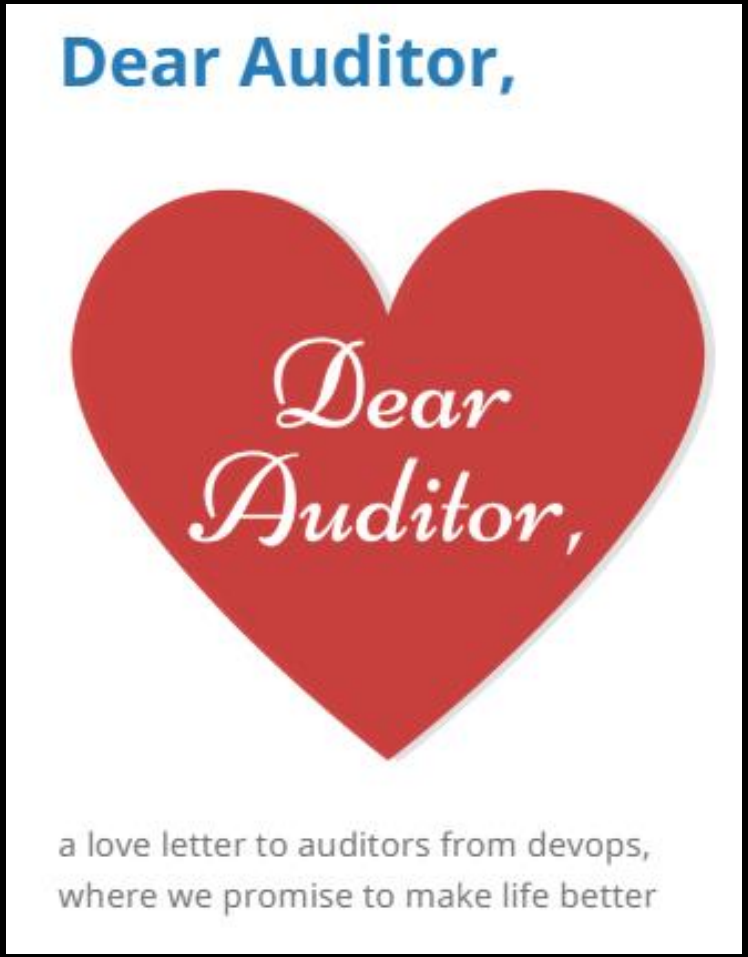
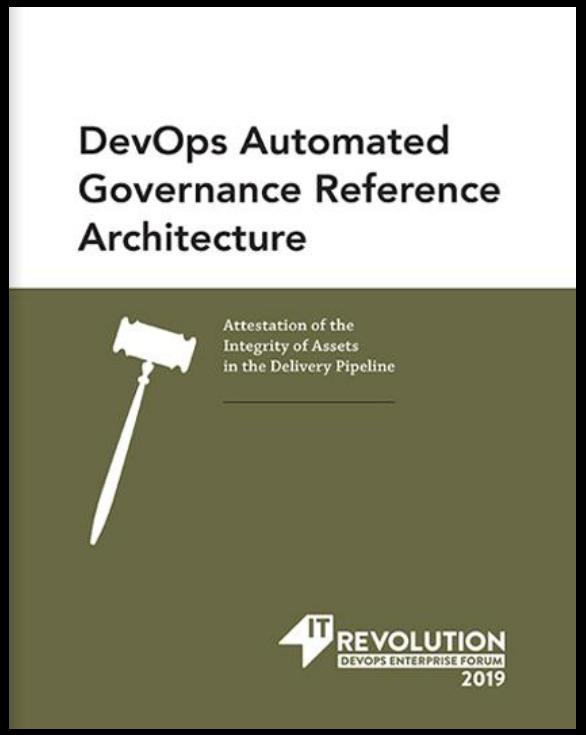
THANK YOU MARIO!
YOUR QUEST IS OVER.
WE PRESENT YOU A NEW QUEST.
PUSH BUTTON B

TO RELEASE

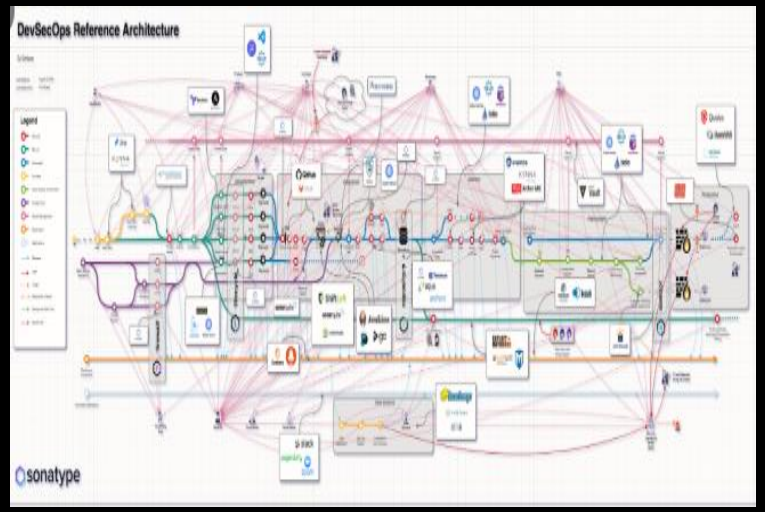


http://dearauditor.org/



As more and more DevOps practices are automated, it becomes harder to capture the data required to ensure all security and compliance concerns are met. ***Organizations need an automated way to track governance*** *throughout the entire software delivery process so they can attest to the integrity of all assets and to the security of all running applications.*

https://itrevolution.com/book/devops-automated-governance-reference-architecture/



Successful DevSecOps practices encompass people, processes, tools, and measurement. But where should you start, how can you validate your existing practices, or what are the possibilities? Then answer the following:

- *Where can we further automate manual, security, and business tasks?*
- *What DevSecOps tools and integrations are others deploying?*
- *What interactions do we need to be aware of or map out?*
