Our DevOps Journey is Incomplete Without Data

Our Data, Architecture & Data Management Practices Need Love & Attention

BMK LAKSHMINARAYANAN
Value Stream Architect, BNZ

@LBMKRISHNA

Data is the lifeblood of the system of the business

Understanding Our Problem

Problem Context

Continuous Delivery, DevOps & Data

Problem Context

- Manual database deployments continue to be a Software delivery bottleneck
- Speeding up database releases are most difficult
- Neglecting the data in our DevOps, Continuous Delivery processes has significant “Business Impact”
- Data issues continue to slow us down, trouble our efforts to continuously integrate, test & deploy

Statistics

46% Extremely or very difficult to speed database releases

23% High risk of deployment failure & extra downtime due to database changes

20% We are slow due to traditional siloed database development practices

57% Application changes require corresponding database changes

@LBMKRISHNA

Understanding Our Challenges

Challenges

Continuous Delivery, DevOps & Data

Enterprise Data Challenges

How do we think about data?
Data lock-in

Decade old standards & conventions

Inherited data management practices

Centralize data team to design, model, deploy & operate

@LBMKRISHNA

Who is Responsible?

Our system complexities are because of our thinking, thinking particularly about the "Data". We tend to compromise a lot as we could not get the "Data" in the right way, at the right time, in the proper format, to the right place

Systems of Engagement
Systems of Intelligence
Systems of Record

@LBMKRISHNA

Architecture Mismatch

Microservices Era & Big Ball of "Data" mud

@LBMKRISHNA

Small Steps, But in Right Direction

Solution Approach

Education, Conventions, Architecture, Shift Left

Solution Approach

- Decentralize Data Management Team
- Conventions & Standards
- Educate, Upskill, Tools, Processes
- Unlock the Data By Adopting Modern Practices

Solution Approach

http://assets.red-gate.com/solutions/database-devops/state-of-database-devops-2020.pdf?v=2

Help Our Data Folks - Practices

- **Make the data first-class citizen**
- **Source control - Database schema**
- **Simplify processes**
- **Review changes early**
- **CI/CD pipeline**

Help Our Data Folks - Futuristic

- **“T” & “Comb” shaped**
- **Data Engineers**
- **Educator & Mentors**
- **Platform Builders**

Help Our Dev & Ops Folks - Educate

- **Data Governance, Lineage**
- **Compliance (PCI DSS, Data Privacy)**
- **Regulations (GDPR, CCPA)**
- **Data Security (PII)**
- **Standards & Conventions (Naming, model, dictionary, catalogue)**
- **Enable Self-Service (Database request, Schema change request)**

Useful Resources

Recommendations

Upskill, Learn, Spread, Share

Recommendations

We need to level up our game

Data, Data Architecture, Data Management & Associated Practices need our love & attention

@LBMKRISHNA

Recommended Approach

- **Understanding current state (Tools, processes, roles, flow)**
- **Making work visible (current workloads, workloads in pipeline)**
- **Value Stream Management (New feature, Tech debt, Incident)**
- **Upskilling (DevOps, CI/CD Practices, Automation)**
- **Investment (Education, Time, Tools, Self-service)**
- **Role play (Data Engineer/Developer for a day)**

Collectively We Need To Come Together, Work Together, Collaborate

Remaining Challenges

Call for Action

Help – Let Us Come Together

- **Automated Governance (Including Data)**
- **Policies via automation and in pipeline**
- **Compliance as code**
- **Everyone is custodian of the Data**

Our DevOps Journey is Incomplete Without Data

Our Data, Architecture & Data Management Practices Need Love & Attention
